Services

1. WEB HOSTING

Web hosting is an essential requirement for any website. Without hosting, you can't make your website go live on the internet. To get your site hosted, live, and ready for visitors, hosting providers give you the tools and server space you need.

We are into hosting services since 2013. In today's digital world change is constant and as a hosting company, we strive our best to help our customers to establish and succeed in their online presence. To make our customers online experience a successful one, we provide a hassle-free experience for our customers, so that they can focus their time and effort on their businesses.

2. RESELLER HOSTING

Reseller hosting is the right choice if you need to begin a web hosting company or build multiple websites. It refers to a hosting web service where the account owner can create sub-packages well within the allotted bandwidth and disk space of his main hosting page and sells it to your clients as per your preference. This hosting is fully white-labelled, which lets you brand as needed.

cPanel Reseller Hosting can be an excellent option to choose. It allows its users to manage all aspects of their site quite effectively, offering more freedom to create accounts and packages and modify your existing data set. With Ucartz, you can easily upgrade your reseller account, and yeah, it's free. As your business grows, you will not have to deal with any hassle while upgrading your account.

3. ONLINE RADIO STREAMING

Ready to Stream Online! We provide an affordable Radio Streaming and have happy clients around the world. Our packages are combined with Unlimited Bandwidth, Unlimited Disk Space, and Unlimited AutoDJ. You can stream your favorite music over the internet at the quality you want.

Our low-cost Reseller panel offers Audio Quality at 320k bitrate, with unlimited listeners, AutoDJ, & Disc Space. It is 100% white-labelled and come with 24x7x365 Tech Support.

Ucartz also offers Dedicated Server to run your Online Radio business & we have the most advanced and efficient control panels such as CentovaCast, SonicPanel & Azuracast. With our fast and reliable servers you will have Anti- DDoS Protection, Assured Uptime, Multiple Location Choice.

4. VIDEO STREAMING

Build a professional-grade Video streaming infrastructure with Ucartz. Configure interactive streaming environments for live events, video conferencing, audio streaming, 24/7 streaming and more.

These video streaming servers enables a wide variety of tasks such as mass storage, trans-coding, live and on-demand video delivery etc. This media server can be installed on any Linux server machine. It is both a web-based and mobile-friendly software solution. We have deep expertise in video delivery and media storage and will help you with your custom project.
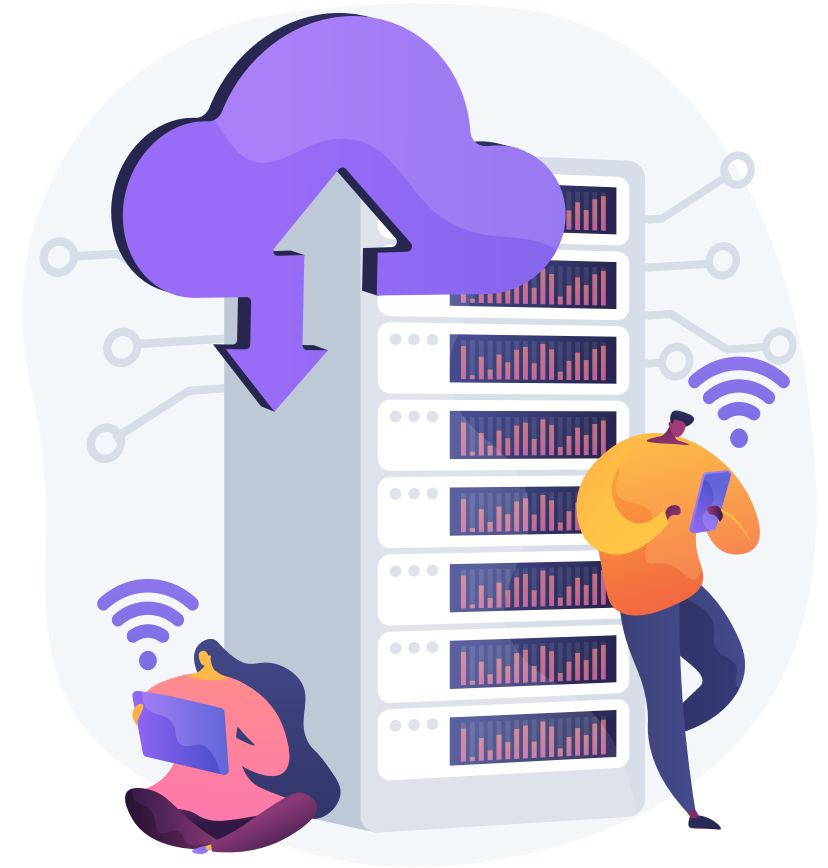

Create live, linear, or on-demand streaming applications and ingest streams from any encoder. Get started with the Media Server to deliver millions of video to your viewers in more than 100 countries around the world.

5. CLOUD HOSTING

In today's digital world, any business that operates needs a lot of computational resources to run their applications and has a lot of data which needs to be stored and processed. This is where the cloud comes into the picture.

Traditionally businesses used to host their applications and store their data on their in-house data centres. Cloud computing is accessing storage and compute resources over the internet. Our cloud computing resources come with up to 99.99% availability. At any point in time, you can scale up or scale down your resources. With cloud computing, create and grow your dream site at a price you love.

6. BARE METAL SERVER

A dedicated server is a single web server that leases upon a single user. They can either lease upon a single user or a single organisation to host the websites. Most commonly used in the web hosting industry.

When you need to host hundreds of websites under one server, then selecting a dedicated server is a good option. A dedicated server is considered to be the next step from a shared hosting environment.

These servers come with good customer support. We have a pre-configured, low-cost dedicated server with the most advanced hardware and top performance.

7. DOMAIN HOSTING

A domain name is your website's address that people type in the browser URL bar to visit your website. And we believe everyone deserves to have a website or an online store. So get started with a perfect domain name.

Your domain name is where you make your first impression. When you're ready to take your big idea to the next level, you're prepared to Do. It's where you build credibility and how you're found. Stand out with a domain name that's perfect for you.

We keep it simple to create a fantastic website reflecting their brand through your choice domain name.

8. SSL CERTIFICATES

Online security is essential for conducting business online. SSL Certificates come with 'https' in your website address and a closed padlock symbol in your browser window to assist with displaying the confidence both you and your customers. Secure your site and add trust & confidence for your visitors.
Get premium protection from a trusted certificate authority.

Find the SSL certificate that's right for your site including Wildcard, comodo, GeoTrust QuickSSL Premium, Thawte SSL 123, and RapidSSL Standard. Buy cheap SSL certificate from Ucartz and secure your website with strong 256-bit encryption. Thus show your visitors that you're trustworthy and authentic.

9. SERVER MANAGEMENT

Server management refers to the tasks performed to monitor and manage your server. Regular server maintenance and monitoring are essential if you want to keep your customers happy and succeed. Indeed, performing these critical tasks can be a tremendous headache when you think about your business's growth. At that point, using a server management company can be the best alternative to lessen the concern.
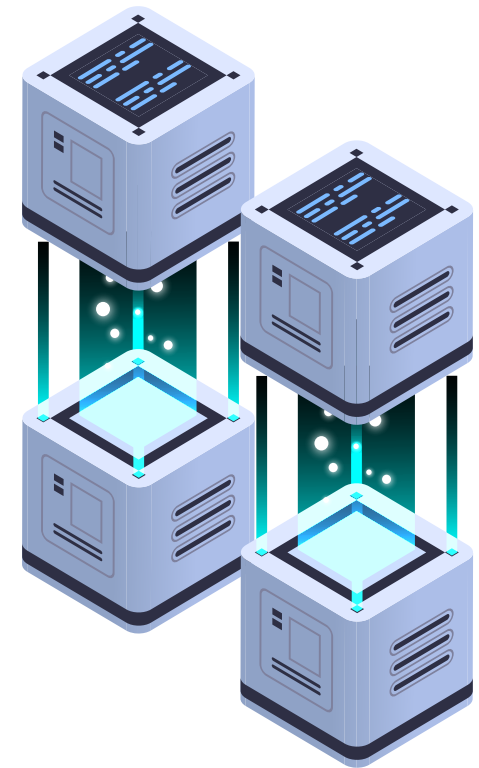

Our experts continuously keep examining your server to increase its performance. No matter if you have need 24/7 Technical Support, Remote Server Administration, Server Security, Linux Server Management, and Helpdesk Management to Data centres, Hosting companies and ISPs around the world. We specialize in Extended Server Security, Server Hardening, Support of Linux/UNIX/Windows servers.

10. COLOCATION HOSTING

Colocation hosting is similar to dedicated hosting, with one notable exception that is considered most beneficial for all businesses. It simply allows you to place the servers in the rack space for many nominal rates. And we provide your businesses with the necessary bandwidth, technical supports, security, air-conditioning, power supplies etc., for seamless expansion.

We offer reliable colocation solutions at an affordable and high degree of stability. In case of power outages and natural disasters, you will not need to worry about the data centre facing a crisis. These facilities are fault resilient and will be equipped with power generators and backup systems. You can be sure there will not be any interruptions of services even if there is a significant power.
